

# FACT SHEET FOR PATIENTS

Abbott Diagnostics Scarborough, Inc.

BinaxNOW™ COVID-19 Ag Card

Updated: April 6, 2021

Coronavirus  
Disease 2019  
(COVID-19)

You are being given this Fact Sheet because your sample(s) was tested for the Coronavirus Disease 2019 (COVID-19) using the BinaxNOW COVID-19 Ag Card.

This Fact Sheet contains information to help you understand the risks and benefits of using this test for the diagnosis of COVID-19. After reading this Fact Sheet, if you have questions or would like to discuss the information provided, please talk to your healthcare provider.

---

**For the most up to date information on COVID-19 please visit the CDC Coronavirus Disease 2019 (COVID-19) webpage:**

---

## What is COVID-19?

COVID-19 is caused by the SARS-CoV-2 virus which is a new virus in humans causing a contagious respiratory illness. COVID-19 can present with a mild to severe illness, although some people infected with COVID-19 may have no symptoms at all. Older adults and people of any age who have underlying medical conditions have a higher risk of severe illness from COVID-19. Serious outcomes of COVID-19 include hospitalization and death. The SARS-CoV-2 virus can be spread to others not just while one is sick, but even before a person shows signs or symptoms of being sick (e.g., fever, coughing, difficulty breathing, etc.). A full list of symptoms of COVID-19 can be found at the following link: <https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms.html>.

## What is the BinaxNOW COVID-19 Ag Card?

The BinaxNOW COVID-19 Ag Card is a type of test called an antigen test. Antigen tests are designed to detect proteins from the virus that causes COVID-19 in respiratory specimens, for example nasal swabs.

## Why was my sample tested?

You were tested because your healthcare provider believes you may have been exposed to the virus that causes COVID-19 based on your signs and symptoms (e.g., fever, cough, difficulty breathing), and/or other risk factors and you are within the first seven days of the onset of symptoms.

## What are the known and potential risks and benefits of the test?

Potential risks include:

- Possible discomfort or other complications that can happen during sample collection.
- Possible incorrect test result (see below for more information).

Potential benefits include:

- The results, along with other information, can help your healthcare provider make informed recommendations about your care.
- The results of this test may help limit the spread of COVID-19 to your family and others in your community.

## What does it mean if I have a positive test result?

If you have a positive test result, it is very likely that you have COVID-19. Therefore, it is also likely that you may be placed in isolation to avoid spreading the virus to others. There is a very small chance that this test can give a positive result that is wrong (a false positive result). Your healthcare provider will work with you to determine how best to care for you based on your test result(s) along with your medical history, and your symptoms.

## What does it mean if I have a negative test result?

A negative test result means that proteins from the virus that causes COVID-19 were not found in your sample. It is possible for this test to give a negative result that is incorrect (false negative) in some people with COVID-19. This means that you could possibly still have COVID-19 even though the test is negative. If your test result is

Coronavirus  
Disease 2019  
(COVID-19)

negative, your healthcare provider will consider the test result together with all other aspects of your medical history (such as symptoms, possible exposures, and geographical location of places you have recently traveled) in deciding how to care for you. The amount of antigen in a sample may decrease the longer you have symptoms of infection. Specimens collected after you have had symptoms for more than seven days may be more likely to be negative compared to a molecular assay. It is important that you work with your healthcare provider to help you understand the next steps you should take.

## What are the differences between antigen tests and other COVID-19 tests?

There are different kinds of tests for COVID-19. Molecular tests (also known as PCR tests) detect genetic material from the virus. Antigen tests detect proteins from the virus. Antigen tests are very specific for the virus, but are not as sensitive as molecular tests. This means that a positive result is highly accurate, but a negative result does not rule out infection.

If your test result is negative, you should discuss with your healthcare provider whether an additional molecular test would help with your care, and when you should discontinue home isolation. If you will not have an additional test to determine if you are contagious, the CDC currently recommends that you should stay home until three things have happened:

- You have had no fever for at least 24 hours (that is one full day of no fever without the use of medicine that reduces fevers)

AND

- Other symptoms of COVID-19 are improving  
\*\*Loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation

AND

- At least 10 days have passed since your symptoms first appeared.

For more information, the CDC has provided guidelines on how to prevent the spread of COVID-19 if you are sick: <https://www.cdc.gov/coronavirus/2019-ncov/downloads/sick-with-2019-nCoV-fact-sheet.pdf>.

## Is this test FDA-approved or cleared?

No. This test is not yet approved or cleared by the United States FDA. FDA may issue an Emergency Use Authorization (EUA) when certain criteria are met, which includes that there are no adequate, approved, available alternatives. The EUA for this test is supported by the Secretary of Health and Human Service's (HHS's) declaration that circumstances exist to justify the emergency use of *in vitro* diagnostics for the detection and/or diagnosis of the virus that causes COVID-19. This EUA will remain in effect (meaning this test can be used) for the duration of the COVID-19 declaration justifying emergency of IVDs, unless it is terminated or revoked by FDA (after which the test may no longer be used).

## What are the approved alternatives?

There are no approved available antigen alternative tests. Any tests that have received full marketing status (e.g., cleared, approved), as opposed to an EUA, by FDA can be found by searching the medical device databases here: <https://www.fda.gov/medicaldevices/device-advice-comprehensive-regulatoryassistance/medical-device-databases> .

A cleared or approved test should be used instead of a test made available under an EUA, when appropriate and available. FDA has issued EUAs for other tests that can be found at: <https://www.fda.gov/emergency-preparedness-andresponse/mcm-legal-regulatory-and-policyframework/emergency-use-authorization>.

# School District of Crandon

## On-Site COVID-19 Testing

The School District of Crandon is now offering on-site COVID-19 testing through the Wisconsin Department of Health Services COVID-19 K-12 School Testing Program. Our goal is to offer safe, accurate testing to our students, staff, and school community in the convenience of our own district. We hope this lessens the burden placed on our families, reduces community spread, and allows our students to return to school safely, in a timely manner.

**TESTING IS VOLUNTARY. NOT REQUIRED.**

**Who Can Be Tested:** At this time, testing is available to students, staff, and volunteers who are **symptomatic** or those with **known COVID-19 exposure**, on a case by case basis.

**How to Consent to Testing:** If you wish to have your child tested, you **MUST** complete the *School District of Crandon COVID-19 SCHOOL-BASED TESTING CONSENT* form and pre-register your child on COVID Connect (forms can be found on our district website – paper consent forms can also be provided upon request-please contact the office to request paper consent).

- Complete either a ONE TIME COVID TESTING CONSENT or YEARLONG COVID TESTING CONSENT:
  - **ONE TIME COVID TEST CONSENT:** Consent form will be valid on the day of testing **only**.
    - [Adult Consent Form \(Online\)](#)
    - [Adult Consent Form \(PDF\)](#)
    - [Child Consent Form \(Online\)](#)
    - [Child Consent Form \(PDF\)](#)
  - **YEARLONG COVID TESTING CONSENT:** Consent for child to be tested for COVID-19 when deemed necessary by the district and understand that child may be tested multiple times throughout the academic year.
    - **PARENT/GUARDIAN WILL BE NOTIFIED AND VERBAL CONSENT WILL BE OBTAINED PRIOR TO EACH TEST PERFORMED**
      - [Adult Consent Form \(Online\)](#)
      - [Adult Consent Form \(PDF\)](#)
      - [Child Consent Form \(Online\)](#)
      - [Child Consent Form\(PDF\)](#)

**Test Type:** Rapid Antigen and/or PCR Lab-Based test

- Rapid Antigen (Nasal Swab) – 15 minute results prior to leaving campus
  - PCR Lab-Based (Nasal Swab) – 24-48 hour results
